

This handout provides a quick reference guide to the basic citation rules of the American Psychological Association.

For complete information, use the following resources:

American Psychological Association. (2020). *Publication Manual of the American Psychological Association* (7th ed.). Washington, DC: American Psychological Association.

Available at both the Warner and the Muskogee library service desks.

In addition, these two websites may be helpful for further guidance:

In-text citations (See chapter 8 for complete details) Citation examples are in gray highlighting.

- Cite a source in the text of your paper using the author's last name and the year of publication. One or both of these elements will be in parentheses, depending on the situation.
- For two authors, cite both every time. For three or more authors, cite all the first time and after that, cite the first author and use the Latin phrase "et al."
- Include the full citation in the reference list at the end of the paper for each in-text citation used.
- Separate citation elements with commas. Required sentence punctuation goes *outside* the parentheses.
 - Kessler (2003) found that among epidemiological samples...
 - Early onset results in a more persistent and severe course (Kessler, 2003).
 - In 2003, Kessler's study of epidemiological samples showed that...
- Citing a specific part of a source, with or without direct quotations, requires the page number, with *p.* for a single page or *pp.* for multiple pages before the number. If there are no page numbers, use the paragraph number with the abbreviation *para.* If there is neither page nor paragraph numbers, cite the heading. (See pages 272-273 of the *Publication Manual*).
 - Rogers (1961) has identified genuineness and transparency as two important elements of a helping relationship (p. 37).
 - Through brain scans of live chimpanzees, researchers have found that, as with humans, "the language-controlling..." (Begley, 1998, p. 57).
 - Basu and Jones (2007) went so far as to suggest the need for "regulation in cyber space" (para. 4).
 - In their study, Verbunt, Pernot, and Smeets (2008) found that "the level of perceived disability ... less by their physical condition" (Discussion section, para. 1).
 - "Empirical studies have found mixed results on the efficacy of labels ... changing consumption behavior" (Golan, Kuchler, & Krissof, 2007, "Mandatory Labeling Has Targeted").

References (See chapter 9 and 10 for complete examples)

- The heading (centered, bold, capitalized) on the page of sources should be **References**.
- Double space the entire list, both between and within entries (this will not be done on this handout).
- Arrange entries alphabetically by the last name of the first author of each work. If no author is given, start with the first significant word in the title.
- Include as much of the date as is provided – (year, month day) if possible, or (year, month), or (year).

- In titles of articles and books (but *not* journal titles), capitalize only the first word of the title, the first word of the subtitle, and proper names.
- Begin each entry at the left margin. If there is more than one line, each subsequent line should be indented one half inch (“hanging indent” in the Paragraph menu of Microsoft Word)
- Include the Digital Object Identifier (DOI) information in the standard citation format for all electronic documents – articles, books, or websites – unless your instructor tells you otherwise.
 - A DOI is a unique alphanumeric string assigned to each article available electronically to identify its content and provide a persistent link to its location online, since URLs can change.
 - Use the DOI in whichever format it is provided with the article. *Examples:*
doi:10.1108/03090560710821161 or <http://dx.doi.org/10.1016/j.appdev.2012.05.005>
